Batch: 2028

Degree: B.E - AI & DS

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 7_COD_Question 2

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    // You are using GCC
    void initializeTable(int table[],int size){
      for(int i=0;i<size;i++){</pre>
         table[i]= -1;
      }
    int linearProbe(int table[],int size,int num){
       int index=num%size:
while(table[index]!=-1){
index=(index+ 1)^
         index=(index+1)%size;
```

```
241801121
    if(index==start){
       return -1;
  return index;
void insertIntoHashTable(int table[],int size,int arr[],int n){
  for(int i=0;i<n;i++){
     int index=linearProbe(table, size, arr[i]);
     if(index!=-1){
       table[index]=arr[i];
  }
                                                                                24,801121
int searchInHashTable(int table[],int size,int num){
  int index=num%size;
   int start=index;
  while(table[index]!=-1){
     if(table[index]==num){
       return 1:
     index=(index+1)%size;
     if(index==start){
       break;
     }
   return 0;
int main() {
  int n, table_size;
  scanf("%d %d", &n, &table_size);
  int arr[MAX], table[MAX];
  for (int i = 0; i < n; i++)
     scanf("%d", &arr[i]);
  initializeTable(table, table_size);
  insertIntoHashTable(table, table_size, arr, n);
                                                    241801121
int q, x;
   scanf("%d", &q);
```

```
for (int i = 0; i < q; i++) {
    scanf("%d", &x);
    if (searchInHashTable(table, table_size, x))
        printf("Value %d: Found\n", x);
    else
        printf("Value %d: Not Found\n", x);
}

return 0;
}

Status: Correct
